

M4 FOUNDATION

Learn how to maximize efficiency starting with this comprehensive, integrated toolkit.

Integrate and Connect Data

With M4 Foundation, integrate and connect data from existing billing, accounting, trouble ticket, GPS tracking and network monitoring applications with a land base map of all network elements. M4 Foundation is made up of many different telecom-specific CAD tools with one purpose: maximizing efficiency and streamlining your operations.

*We chose the M4 Solutions platform in order to **simplify and consolidate** our mapping needs. With M4 Solutions, we'll have **quick and easy access to data** stored and **shared company wide**.*

- DeeDee Kluser,
Oregon Telephone

Benefits

- Automatically populate tax district footage information for copper and fiber with enhanced boundary tools
- Query generation is quick and easy with Auto-SQL
- Customize reports for defined selection sets
- Quickly and easily generate street and address reports
- Integrate this new technology with your existing CAD or OSS programs

Features

- Easily attach, view and edit images connected to map elements
- Calculate and assign addresses to structures
- Use a comprehensive set of GIS tools to design, manage and map fiber, copper and coax network infrastructures
- Import 200+ formats with the Universal translator
- Define user-specific keyboard shortcuts
- Contains a multi-user and network-ready system
- Link map data to existing customer, billing or assignment applications
- Customize your scenarios when designing new CLEC areas
